About us

Integrating the Driver Experience

OpenSynergy, an independently managed worldwide company, specializes in embedded automotive software with the automotive leading Bluetooth® stack Blue SDK. It is the reference Bluetooth® implementation for many OEMs and Tier1s around the world with more than 300 million vehicles on the road. With 25 years' experience in the automotive market, OpenSynergy also provides engineering services to support the Bluetooth® Certification, the customization of its products to achieve high-quality products and optimize individual use cases' needs. Our Customers and Partners receive fast and flexible support, both when implementing OpenSynergy's products in their infrastructure and through its qualified engineering services working reliably and successfully in all development and integration work with Blue SDK in hundreds of series projects.

Why OpenSynergy?

Flexible cooperation and business models

World-wide support

Services, up to mass production
